

Adhira Saravanan

Mr. Navneet

B.E.A.S.T AI

14 June 2026

The 3 Gs

1. What you GOT?

- ★ My soft skills include teamwork, organization, and a positive attitude. My hard skills include a good amount of HTML/CSS web development, basic knowledge about Python and Javascript programming languages, and currently mathematics up to Algebra 2.

2. What do you wanna GET from this internship?

- ★ I would like to gain an understanding of how AI works, how it ties with Machine Learning and the different parts involved. I also want to get an experience of using AI in real-world projects and finding solutions to problems. Furthermore, I want to work with other members and expand my thinking.

3. What do you wanna GIVE?

- ★ I can contribute my research skills, analytical thinking, and brainstorming ideas. I can also give ideas and information of what I know based on my research. I also want to give my curiosity and growth mindset to this team.

Pre-requisite Research

1. List down Domains/Roles/Functions you would like to build your careers:

- Software Engineer
- Artificial Intelligence
- Computer Science
- Mathematics
- Biomedical Engineering involving software

2. Research the Large, Medium, Small or Startups in those areas:

- Open AI
- Anthropic
- Google
- Meta
- Jane Street
- Abbott Laboratories

3. List down Top 5 company you would like to work:

- Open AI
- Google
- Microsoft
- DeepMind
- NVIDIA

4. Look for freshers job openings in them and understand the skills they are looking for Roles and Responsibility, mix of both hard and soft skills:

- Hard skills: Python, Java/C++, Data Structures & Algorithms, Machine Learning, Statistics, Linear Algebra, Calculus, Data Analysis, SQL, Git/GitHub, Cloud Computing.
- Soft skills: Communication, Teamwork, Leadership, Critical Thinking, Problem Solving, Adaptability, Curiosity, Research Skills, Project Management, Presentation Skills.

Project Ideas

1. Idea #1: AI Without Human Interaction

a. Background & Context

- Normally AI assistance aids people when called upon and when people ask direct questions.

b. The Problem

- This creates repetition and a waste of time. People tend to forget what they ask for and miss out on opportunities where the AI could have helped.

c. Project Requirements

- AI has to continuously monitor
- Voice interaction
- AI should be aware of surrounding
- AI should voice out its thoughts (things people might have mistaken/forgotten)
- AI should also answer when called upon

d. Expected Outcomes

- AI assistance is more productive
- Improved human and AI interaction
- Reduces waste of time
- Reduces any human error
- Is more of a human-like assistant

2. Idea #2: Competitive Exam Assistant AI

a. Background & Context

- Students who prepare for the SAT, ACT, AP examination, JEE, NEET, The Olympiads, or other competitive examinations have a hard time finding the right study method, materials, and guidance.

b. The Problem

- Everyone needs different strategies, methods, and guidance. Also, preparation for these types of examinations is extensive and requires a lot of time to go through.

c. Project Requirements

- AI should gather past papers, questions, and other materials needed for the specific exam.
- AI should personalize study schedule, materials, and progress for students so that it can fit their goals.

- AI should analyze the student's performance levels (where they are lacking or need improvement)

d. Expected Outcomes

- AI will provide a customised learning experience for each student
- Better preparation
- Better student performance
- Inexpensive

3. Idea #3: Volunteering & Internship Match AI

a. Background & Context

- A lot of students miss out on volunteering or internship opportunities that they are interested in because they don't know where to look.

b. The Problem

- Information about volunteering or internship opportunities are scattered across multiple websites. This takes a lot of time to go through and to find which opportunities are interesting for the user.

c. Project Requirements

- Student profile (interests, hobbies, colleges they want to attend, career they want to pursue)
- Skill assessment (what they are good at such as programming/art/communicating...)
- Collect all opportunities and create a database
- Resume/Application guidance

d. Expected Outcomes

- Less overwhelming to look everywhere yourself than to let the AI do it
- Aides college applications

Typical “Tell me about yourself”

1. 1 min:

“Hello, my name is Adhira Saravanan, and I’m a rising sophomore from Troy, Ohio. One thing that has shaped who I am is that I’ve attended six different schools across three countries. Those experiences helped me become adaptable, open-minded, and comfortable working with people from different backgrounds. Academically, I like challenging myself through advanced courses offered by my school and exploring my interests beyond the classroom. Outside of academics, I play tennis, which I always look forward to. I like working with others and contributing my ideas toward solving problems. Currently, I’m interested in computer science and mathematics, and I’ve also been exploring biomedical engineering. Because of these interests, I’ve been looking for opportunities to gain real-world experience, which led me to this internship. I’m excited to learn, contribute my part, and develop my technical skills.”

2. 3 min:

“Hello, my name is Adhira Saravanan, and I’m a rising sophomore from Troy, Ohio. One thing that has shaped who I am is that I’ve attended six different schools across three countries. Those experiences helped me become adaptable, open-minded, and comfortable working with people from different backgrounds. Academically, I like challenging myself through advanced courses offered by my school and exploring my interests outside the classroom. I am especially interested in computer science and mathematics because I enjoy problem-solving and understanding how things work. For my sophomore year, I will be taking AP Precalculus and AP Statistics, which I am excited about because they will help strengthen my mathematical foundation and analytical thinking skills. My interest in computer science began when I took programming class at school during my freshman year, where I learned HTML and CSS for web development, Python for programming, and JavaScript for 3D animations. This class really inspired me to take on programming as my interest. From there, I have become interested in learning more advanced topics like

algorithms, machine learning, and software development. I also want to continue developing my programming skills in Python, Java, and C++. Outside of academics, I play tennis, which I always look forward to. I also enjoy working with others and contributing my ideas toward solving problems. I am interested in exploring how computer science, artificial intelligence, and mathematics can be applied to fields such as robotics and biomedical engineering. I would also love to use the skills I develop to participate in robotics competitions like FIRST Tech Challenge and work on projects that solve real-world problems. Because of these interests and the desire to learn, I have been looking for opportunities to gain practical experience, which led me to this internship. I'm excited to learn, contribute my part, and develop my technical skills."

3. 5 min:

"Hello, my name is Adhira Saravanan, and I'm a rising sophomore from Troy, Ohio. One thing that has shaped who I am is that I've attended six different schools across three countries. While moving around so much was challenging at times, it helped me become adaptable, open-minded, and comfortable working with people from different backgrounds. Every school was different, and I had to learn how to adjust quickly, make new friends, and work with different people. I think those experiences helped me become more confident to take on new challenges. Academically, I like challenging myself through advanced courses offered by my school and exploring my interests outside the classroom. I am especially interested in computer science and mathematics because I enjoy problem-solving and understanding how things work. For my sophomore year, I will be taking AP Precalculus and AP Statistics, which I'm excited about because they will help strengthen my mathematical foundation and analytical thinking skills. I enjoy learning math because it's so fascinating, and I like working through difficult concepts. My interest in computer science began during my freshman year when I took a programming class at school. In that class, I learned HTML and CSS for web development, Python for

programming, and JavaScript for creating 3D animations. Before taking the class, I knew very little about programming, but it quickly became one of my favorite classes. It was amazing to see how code could be used to create websites, animations, and other projects. From then, I've become interested in learning more advanced topics like algorithms, machine learning, and software development. I want to continue developing my skills in Python, Java, and C++. Another area that I've been exploring is biomedical engineering. Outside of academics, I play tennis, which I always look forward to. Tennis has taught me the importance of practice, patience, and staying committed to long-term goals. It also shows me that improvement takes time and effort, which is something I try to do to my academics and personal projects as well. I also enjoy working with others and contributing my ideas toward solving problems. I think teamwork is important because people bring different skills and perspectives that can lead to better solutions. I'm interested in exploring how computer science, artificial intelligence, and mathematics can be applied to fields such as robotics and biomedical engineering. I would love to use the skills I develop to participate in robotics competitions like FIRST Tech Challenge and work on projects that solve real-world problems. Because of these interests and my desire to keep learning, I have been looking for opportunities to gain practical experience, which led me to this internship. I'm excited to learn, contribute my part, and develop my technical skills."
